

WHITFIELD & BROWN

Case Study

West Kirby Grammar School Construction of New Teaching Facility

The project comprised the construction of a new two storey teaching facility, with 8 classrooms, seminar and tutorial rooms and a common room with kitchen facilities.

The new facility also has large versatile corridor spaces which are naturally lit by a double storey staircase atrium, forming the link between the original school and a previously built 6th form block.

The facility has its own self contained energy efficient boiler and other energy efficiency measures include substantial glazed facades, light motion sensors and sun pipes.

Contract Title: New Teaching Facility

Client: Wirral Council

Architect: Wirral Technical Services

Value: £1,200,000

Contract Period: 34 Weeks
